

Make your scroll:bit show words

1. Go to MakeCode and click on the scroll:bit part of the menu.

2. Choose this command and drop it into the forever block.

3. Type "hello world" or whatever you want your message to be into the brown box.

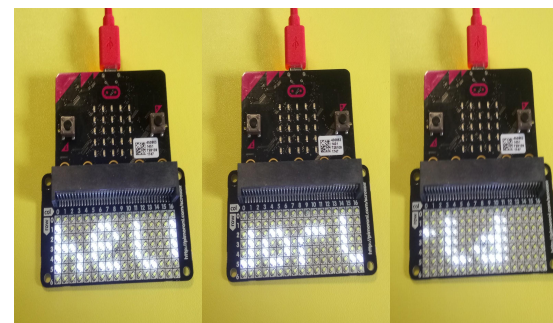

Challenges

If you prefer, you could make it show the message when you press a button, e.g. this displays a message when you press A.

To save battery, how could you reduce the brightness?

4. Download your code and flash it onto the micro:bit by dragging the saved file onto the micro:bit file system.

How could you make it scroll faster?
